1. Introduction

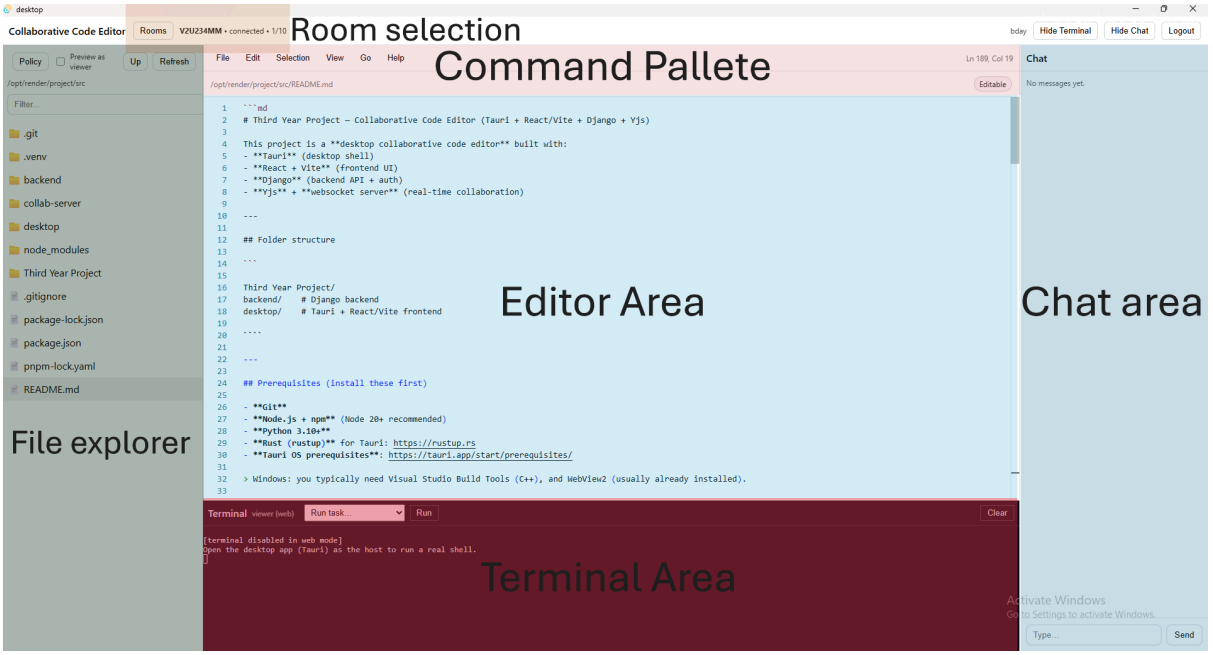
- This app is for students and coders to edit, and collaborate on coding projects.
- To run this you need a desktop computer and an internet connection. With at least windows 10 installed, windows 11 also works.

2. Getting started

2.1 Launching the application

1. If the project has been downloaded you must double click on the desktop icon on your home screen titled “desktop” with a yellow and blue logo.
2. The application will open and you will be prompted to either log in or create an account, do either accordingly. See figure 1 for how this screen will look.

3. User interface tour

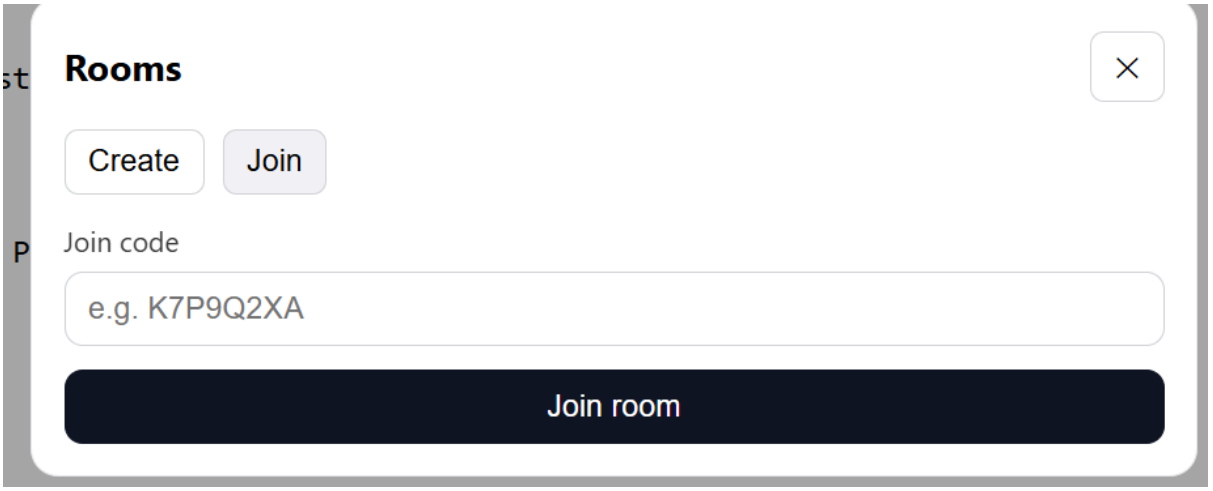


4. Core Tasks

4.1 Create / Join a collaborative Session

Join a room:

1. Click on the rooms button on the top left
2. Click the Join button
3. Enter session ID
4. Click Join room
5. Confirm connected status when you see connected beside the rooms button



Create a room

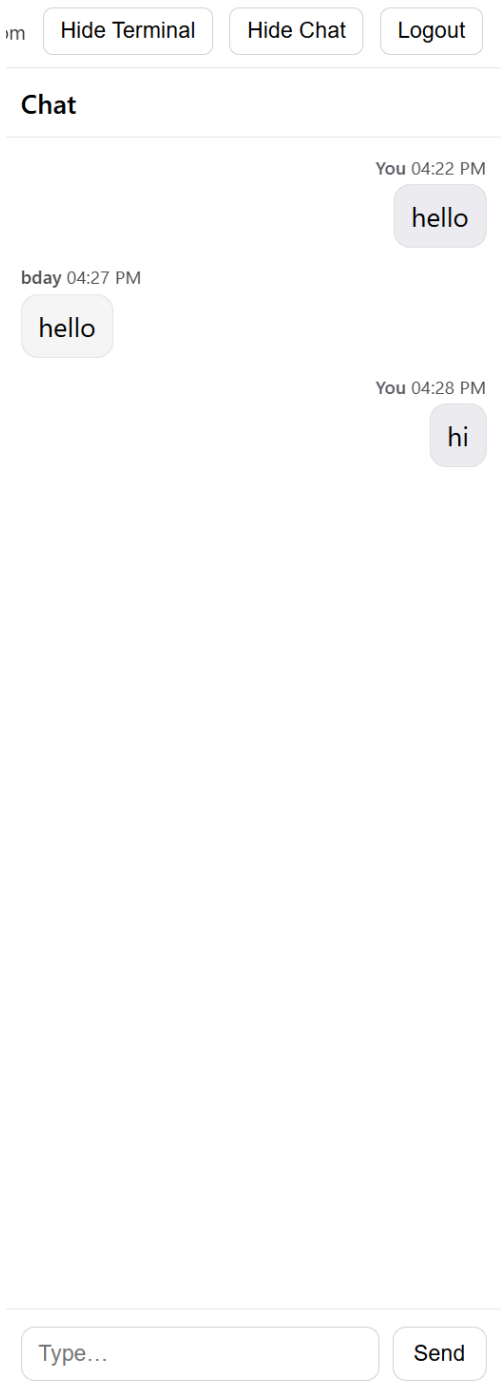
1. Click on the rooms button on the top left
2. Click the create button
3. Enter your team name
4. Click Create Room button
5. You can send the ID room to other users after that

4.2 Editing a document

- Click on file you wish to edit
- Start editing
- Result is that everyone in the session will see your edits

4.3 Chatting with your teammates

- On the top right of the screen, you can see the show/hide chat panel.
- Click on that to open and then chatting with your teammate



5. Tips and best practices

- Use consistent room names
- If collaboration is slow check connection

6 Troubleshooting

App poems but the screen is blank

- Close and reopen this is due to the backend and websocket starting

Collaboration isn't syncing

- Make sure both users are in the same room
- Check connection status
